

# Adoption

*The solution will be more likely to be adopted and implemented by the users*

Consultation

Partnership

Leadership

The more the users are engaged in the design process, the more likely their needs will be addressed and the greater their buy-in to the solution.

# Behavior Change

*Users will change their behavior in significant ways due to the intervention*

Consultation

Partnership

Leadership

The more users engage with other stakeholders and are involved in the design process, the more likely they will shift their mindsets and engage in new attitudes and behaviors.

# Capacity Building

*Users will gain design skills that they can use to develop solutions to future challenges*

Consultation

Partnership

Leadership

The more actively users participate in design processes, the more they develop their skills and build their confidence.

# Collaboration

*Users will be open to continue working together with the design team on future projects*

Consultation

Partnership

Leadership

Greater engagement between the users and the design team leads to a greater chance of developing a lasting commitment to working together.

# Feasibility

*The solution can be implemented effectively in the intended context*

Consultation

Partnership

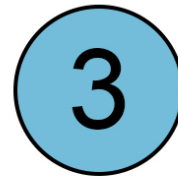

Leadership

The greater the degree of decision-making authority the users have, the more likely that their knowledge of the local conditions will prevail.

# Improvement

*The solution will offer an improvement over an existing or underperforming solution*

Consultation

Partnership

Leadership

The more diverse the members of the design team, the broader the range of perspectives and the more likely it is to generate an improved solution.

# Responsibility

*Users will take greater responsibility for implementing and managing the solution*

Consultation

Partnership

Leadership

Greater user engagement in decision-making leads to greater ownership and increased sense of responsibility over the solution.

# Responsiveness

*Users will feel their opinions are taken into account and incorporated into the solution*

Consultation

Partnership

Leadership

The more the users are engaged in decision-making, the more likely their point of view is prioritized.

# Solidarity

*Users will work together more effectively due to their involvement in the intervention*

Consultation

Partnership

Leadership

The more users engage with each other around a common goal, the more likely they are to build relationships and work together in the future.

# Specificity

*The solution will be tailored to the user's needs and context*

Consultation

Partnership

Leadership

The more involved the users are in the process, the deeper the understanding of their needs and context, and the more this will be integrated into the solution design.

# Trust

*Users will have greater trust in those leading the project*

Consultation

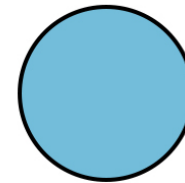

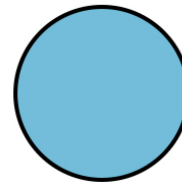

Partnership

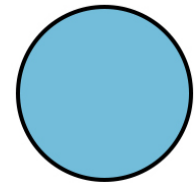

Leadership

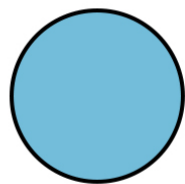

The more users are engaged with other stakeholders around a common goal, the more potential there is to build mutual trust and deepen relationships.
